

ZESTRON® Bath Analyzer 30

Area of application for the ZESTRON® Bath Analyzer 30:

In order to achieve consistent cleaning results, the user has to ensure that the concentration of the cleaning agent stays within the recommended application range. Various factors such as “drag-out,” dilution and evaporation can potentially influence the actual concentration. Regular measurements of all process related parameters are therefore highly recommended. The ZESTRON® Bath Analyzer 30 is a simple, easy to use method that provides reliable and accurate results for fresh as well as contaminated cleaning baths.

Simple measurement in only a few steps:

① Sampling / Decanting

② Adding test solution

③ Shaking / Evaluating

Advantages of the ZESTRON® Bath Analyzer 30:

- Very precise concentration measurement for fresh as well as contaminated cleaning baths
- Simple and fast procedure
- Requires little space with minimal investment

Specifically developed for the following cleaning agents:

- HYDRON® WS 400

The ZESTRON® Bath Analyzer 30 Kit includes:

- 1) PE bottle with injection nozzle
- 2) 2 pairs of vinyl gloves
- 3) Digital thermometer (°C/°F)
- 4) Sampling beaker
- 5) Glass cylinder with marking
- 6) 6 x 100 mL ZESTRON® Bath Analyzer 30 test solution
- 7) User manual, including correlation charts (not illustrated)

To place an order:

Part No.	Product Description
0425-0000	ZESTRON® Bath Analyzer 30 Portable case
0426-0100	ZESTRON® Bath Analyzer 30 6 x 100 mL refill bottles in carton
0426-0005	ZESTRON® Bath Analyzer 30 5 L refill bottle
